

VALIDATION SOLUTION

Web Validation

Web Validation is an easy to access, intuitive solution designed to offer a web-based alternative for the application of discounts to transient parking users. Authenticating with unique ID credentials, each merchant is able to access a customized set of discounts, then easily select and apply. Thanks to a cloud-hosted solution, validations data are safely stored and conveniently available for detailed analysis.

base model

- Cloud-hosted validation solution
- Web interface for validation of barcode or magnetic stripe tickets
- Unique web solution serving single or multiple locations
- Administrative management account
- Multiple sub-levels of access can be managed from the main account; ideal for the retail environment

options

- Web Validation Tablet where customers can validate their own tickets; ideal for environments with unattended validations
- Barcode scanner for easy fill in of the validated tickets numbers, simplifying desk operations
- Advanced customization of the validations reporting eg. parking operator details, discount usage, reason of the validation
- Set a limit of validations to be applied on daily, weekly, or monthly basis
- Control a prepaid total value for validations, including thresholds, real-time access to current balance and reporting
- Manage validations for multiple sites from a single administrator; ideal for multi-area parking lots

standard features

- Secure SSL communication
- Web Sockets communication from the parking server to the cloud-hosted web validation site, minimizing the risks related to firewalls
- Web Validation site can be accessed by any web browser enabled device such as desktop PC, laptop, tablet
- Straightforward, detailed reporting of users activities and applied validations
- Multi-language support in English and French
