

# VALIDATION SOLUTION

Manual Solution For Parking Ticket  
Discount

ZEAG ValiMark is an inexpensive and very convenient solution to apply a single validation/discount to a ticket. Compact in size and light weight means it can be handheld or mounted on a desktop. It operates offline without the need for electrical power. The operator inserts the magnetic stripe ticket into the ValiMark and then manually closes the clam. The parking ticket is re-coded by altering the magnetic stripe information allowing a variety of discount types (percentage, time, money value or other rates). The ticket is marked to show that it has been discounted. Payment or exit stations then calculate a predetermined discount when the ticket is presented.
